

# EXTENDABLE TRAILERS

At Dennison we understand that sometimes you need a little extra. And you can get it with our extendable trailers. The Dennison extendable, or trombone, platform trailer allows you to extend its length by up to 8m – giving an overall length of 21.25m. And because not everything is 21.25m long, our trailers can be extended by 1500mm intervals giving a huge amount of flexibility.

Because we know that our trailers face some of the most extreme construction conditions, Dennison engineer our products to last. Our extendable trailer is a prime example – built to rugged specifications, our designs have been tested over and over again, both by our engineers and by our customers. So, give us a bell and we'll sort you out with a trombone!

Example features of Dennison extendable trailers:

- Straight frame or drop frame
- Air-operated locking pins
- Extends to 21.25m with 1500mm intervals
- Option of self track rear axle
- Option of outriggers
- Option of ramps
- Option of twistlocks

BRING IT ON
