

# SLIDING BLOCK CARRIERS

The Dennison sliding bogie block carrier offers exceptional on site manoeuvrability, stability and a proven Dennison bogie system, allowing our specialist trailers to beat rigid 8-wheelers and conventional trailers hands down.

Flexibility is our main aim with all of our sliding bogie trailers, and our block carrier is no exception. With a range of options – including a choice of where the crane is mounted and the option of specifying a longer platform – Dennison sliding bogies really do offer everything. As is the case with all our sliding bogies, the block carrier can operate legally at 44 tonne GVW and can be operated without having to leave the cab.

Example features:

- Operates legally at 44 tonne GVW
- Extends to 10.6m from kingpin to rear axle
- Saves on time and fuel costs
- 9.7m platform with 900mm at rear for crane
- 6200kg unladen weight without crane
- Optional dropsides and rear mounted crane
- Deck length of 9.75m
