

SLIDING MIXERS

The Dennison sliding mixer, which comes with a choice of manufacturers' barrels, offers remarkable benefits to operators of eight wheel rigid mixers, including exceptional on site manoeuvrability and stability and the proven Dennison sliding bogie system.

They save time – up to 30% – as well as money by reducing the number of trips needed to deliver materials to site. Dennison sliding mixers can shed a full metre in length, meaning that they can get into places that even eight wheel vehicles can't. And with up to 50% more payload than an eight wheel mixer, important to consider with Working Time Directive requirements, they can cut fuel consumption by up to 19% and operate legally at 44 tonne GWW.

Example features:

- Operates legally at 44 tonne GWW
- Saves on time and fuel costs
- Slides a full metre for flexibility and manoeuvrability
- Up to 50% more payload than an equivalent 8-wheeler
- Air operated chassis locking pins
- In cab controls
- Drum or disc brakes
