PLATFORM TRAILERS

Here at Denison we are very proud of our platforms. They boast excellent build quality, of course, but what we're most proud of is the fact that every platform we make is built exactly to each customer's requirements. We don't believe in 'off the shelf' trailers because, at the end of the day, each of our customers will use their platform in a unique way. Years of experience have taught us that even the smallest of details can make all the difference, that's why our customers can choose from hundreds of options, from the overall length to the spacing of rope hooks and from the height of the headboard to the make of the running gear.

Example features of Denison platform trailers:

- Up to 13.6m length
- Suitable for GCW up to 44 tonnes
- Option of twistlocks to suit 20', 30', 40', 45', and 13.6m containers
- Oil and timber specifications available
- Option of tandem or triaxle
- Designed to accommodate both fixed and rollalong cranes
